

LogiTilt

a tilting device for the trays in the service opening of the LogiMat vertical lift...

With our option for the market leading vertical lift LogiMat we have once again set new standards for ergonomic handling.

LogiTilt is a tilting device for the LogiMat service opening. By tilting the drawer ca. 45 degrees the picking depth is minimized. The operator no longer needs to stretch for picking from the back of the drawer, and at the same time the overview is optimized.

By combining LogiTilt and LogiLift (adjustable service opening on LogiMat) the world's most ergonomic picking station is obtained.

LogiTilt can be delivered as an option on new LogiMat vertical lifts, and it can be mounted on existing units...

LogiTilt is supported by our software suite SHARK. Various parameters can be set to trigger LogiTilt, e.g. tilting the drawer only when necessary.
